(785) 477-9854

Enough of this!

Scrap the chains.
Scrap the ratchets.
Scrap the come-along.
Scrap the loader.
Scrap ALL the outdated methods.

Start using a machine that was designed *specifically* for saving injured cows. A machine that was designed not only with the animal in mind, but also for the safety of the operator.

The **Cow Crane** can be operated by a single person and transported easily. The two worm-drive winches can be used to safely lift a hip clamp, wide lifting strap, or even a full-body sling. Get the cow on her feet without all the hassle.

How It Works

1. Roll the Cow Crane backwards over the down cow (fig2).
2. Fasten the hip clamp to the cow and raise the rear end slightly off the ground until there is a gap underneath the cow (fig 3).
3. Slide the front strap underneath the cow and clip to the front hoist (fig 3).
4. Raise both hip clamp and front hoist until cow is in standing position (fig 4,5).
